

## Best in Klas Teleradiology Solutions Sets up a New Clinical Trial Imaging Core Lab

Conducts a workshop on clinical trials imaging in collaboration with DIA.

Bangalore, India (PRWEB) July 10, 2012

Teleradiology Solutions, the Klas rated Number 1 national teleradiology provider, has entered the Clinical Trials Imaging Market with the creation of its niche unit- Image Core Lab (ICL). The new entity has been formed recognizing that medical imaging now plays an increasing role in the development of new therapeutics, either as a surrogate endpoint or an endpoint in its own right. Image Core Lab (ICL) is leveraging the combined 10-year experience of its creators - Teleradiology Solutions (<http://www.telradsol.com/>) in services and TeleradTech's RadSpa (<http://www.teleradtech.com/>) in technology and workflow development to offer a range of services in the Management and Review of Imaging in Clinical Trials. ICL is positioned to assist sponsors and CRO's in the clinical trial arena where medical images are involved.

As its opening event, Image Core Lab in collaboration with the Drug Information Association (DIA) and Teleradiology Solutions is conducting an intensive one-day workshop on imaging in clinical trials on July 27th in Bangalore. In this program, distinguished international faculty speakers will review the current practice of imaging biomarkers in clinical trials. Additionally, participants will be oriented on newer imaging modalities and the latest imaging criteria with a specific focus on quantitative imaging. The course content will focus on the need for consistency, accuracy and reproducibility of imaging data in clinical trials and how to achieve this.

Ankita Puri, Head of New Business Development for ICL says "The regulatory issues to standardize the data and to remove bias from site evaluation have also led to the strong need for centralized labs such as ICL. We are confident that ICL will provide a high-value service to the Pharma, Biotech and CRO industries and give them significant impetus in the imaging component of their drug development activities. The forthcoming workshop will serve to increase awareness of the role Imaging plays today in Clinical trials"

About Image Core Lab:

Image Core Lab (ICL), a partner company of Teleradiology Solutions and TeleradTech is using its experience in Clinical Trial Imaging, Technology and Workflow development to offer a range of services in the Management and Review of Imaging in Clinical Trials. It was set up as an imaging laboratory for the centralized quality control and assessment of images. ICL assists sponsors and CRO's with the integral part of the clinical trial arena in all therapeutic areas where medical images have to be collected. The regulatory issues to standardize the data and to remove bias from site evaluation have also led to the strong need for centralized labs such as ICL.
